Summary

AI Engineer with 2 years shipping end-to-end LLM and full-stack products as the sole engineer for scientific and business teams at Givaudan — including a consumer-research platform adopted by 5+ regions across 10+ studies and an agentic AI orchestration system (LangChain, LangGraph, RAG, MCP). 4.5 years of prior enterprise software delivery at Accenture.

Skills

AI/LLM: LangChain, LangGraph, RAG, multi-agent orchestration, MCP servers, Qdrant, LangSmith, evaluation/evals structured outputs, prompt engineering

Backend: Python, Django, FastAPI, REST APIs; Java (formal training), pytest

Frontend: React, JavaScript, WebXR (A-Frame)

Cloud/DevOps: AWS (ECS, EC2, ECR, S3, Lambda, RDS, ALB, API Gateway, Route 53, Cognito), Docker, GitHub Actions CI/CD, Prometheus, Grafana

Data: PostgreSQL, SciPy, linear programming

Experience

Givaudan

Cincinnati, OH, USA

Software Engineering Intern

Oct 2024 – Present

- Built and deployed Mesight IAT, a Django/React/PostgreSQL research platform capturing explicit and implicit consumer responses to aroma and food products beyond liking scores; adopted by 5+ regions across 10+ studies, generating an estimate \$100K+ in internal program revenue to date.
- Saved ~\$50K vs. the external vendor quote by building Mesight IAT in-house; recognized as a 2026 Givaudan Award Winner for contributions to the Myromi project.
- Containerized services with Docker and deployed to AWS (ECS, RDS, ALB, Cognito auth, Route 53) with GitHub Actions CI/CD, enabling regional teams to receive updates with no manual server work.
- Built the Optimum Blend Tool (React, Django, FastAPI, SciPy): interactive formulation optimization for flavorists, with high-throughput FastAPI pipelines returning optimizer results to the UI in real time.
- Built a multi-agent AI orchestration system (LangChain, LangGraph, FastAPI) integrating MCP servers and RAG over internal documentation and vector databases, enabling conversational reasoning across internal tools.
- Engineered a custom WebXR application (A-Frame) for immersive aroma evaluation on VR Headsets — local sideloaded execution, 4K 360° video, adaptive resolution, interactive 3D controls integrated with external sensory hardware.

Projects

Self-Hosted LLM Platform | NVIDIA DGX Spark, vLLM, Python, Caddy, Qdrant

- Serve local LLMs via vLLM and Ollama behind a LiteLLM gateway and Caddy reverse proxy, with API-key management and Postgres usage tracking. [GitHub Link](#)
- Implemented Redis-backed Python dispatchers running scheduled agents (Eisenhower-matrix task prioritization).
- Developed a RAG pipeline utilizing SearXNG metasearch, Qdrant vector database, and embeddings for retrieval-augmented answering.

Experience (Continued)

Accenture

India

Packaged App Development Senior Analyst

Dec 2018 – Jul 2023

- Enterprise software delivery for a global insurance client (underwriting services).
- Built an automated JavaScript deployment solution that cut release update time from 9 hours to 20 minutes.
- Designed an end-to-end test automation framework with Parasoft SOAtest adopted department-wide, cutting daily smoke-test runs from 2 hours to 30 minutes.
- Ranked top 10% of 200+ participants in Accenture's intensive Java development training program.

Education

University of Cincinnati

Cincinnati, OH, USA

Master of Science (M.S.) Information Technology | GPA: 4.0/4.0

2023 – 2024

J.B. Institute of Engineering & Technology (JNTUH)

India

Bachelor of Technology (B.Tech.) Information Technology | Score: 76%

2014 – 2018

Awards & Certifications

Givaudan Award Winner (2026)

Graduate Incentive Award (GIA) — \$12,483 scholarship for academic excellence, University of Cincinnati

Pinnacle Award – Rising Star, Accenture — recognized for technical excellence and contributions

Amazon Web Services Certified Developer - Associate (2020)
